

**CONSERVATIVE INVESTMENT STRATEGY**

**Basic information:**

Reference currency	EUR
Minimum one-time investment	€5,000
Recommended holding period	At least 5 years
Optimum portfolio structure	75% conservative component, 25% dynamic component

**Investment restrictions:**

- Maximum share of equity component investments - 30%
- Maximum share of bond component investments - 80%
- Maximum cash share - 10%
- The share of a single instrument in the portfolio must not exceed a weighting of 25%
- The strategy includes reinvesting of returns

**Risk indicator:**

- Product classification: 3 (SRRI)

**The conservative investment strategy** is intended for Clients with a slightly higher risk aversion, whose holding period is at least 5 years. Investors seek a higher return compared to classic savings products and, at the same time, they are willing and able to assume the risk. They are aware that a change in the holding period may significantly contribute to increased likelihood of a negative investment result.

**Investment strategy objectives:**

The strategy aims to achieve returns through investments in selected ETFs (exchange-traded funds). No investments are made in non-ETFs. **The conservative strategy** is based on medium-term holding periods with an optimum 75/25 portfolio distribution (75% conservative component, 25% dynamic component), while the portfolio structure should not exceed the 70/30 ratio (70% conservative component, 30% dynamic component). **The conservative strategy** aims to achieve an above-average return (compared to bank deposits and other forms of savings).

The conservative component includes bond ETFs that invest in bonds with shorter, intermediate and longer-term bonds. This component is diversified geographically, investing primarily in corporate bonds, and to a lesser extent in government bonds. It focuses on both investment-grade and non-investment-grade bonds. Investments in US or in emerging markets may not be hedged in euros, although the strategy internally hedged instruments are preferred in the selection process.

**PARTNERS INVESTMENTS, o.c.p., a.s.,**

Einsteinova 24, 851 01 Bratislava, CRN: 52 413 179, TIN: 2121011475

The Company is incorporated in the Business Register of the Bratislava I District Court, Section Sa, File No 6941/B

Tel.: +421-2-32 002 732, e-mail: info@partnersinvestments.sk

The dynamic component includes equity ETFs or equity funds that are fully governed by ESG principles. These may be index or actively managed ETFs or funds. The component is diversified geographically and by sector. It may include factor ETFs or different ETFs focusing on different investment strategies (size, momentum, quality, growth, value, minimum volatility).

**The conservative investment strategy** is actively managed. Allocations may change based on market conditions or when switching between ETF alternatives while preserving the defined portfolio's strategy, allocation and diversification. The portfolio may be structured differently from the optimum allocation and individual components may be 5% share of the entire portfolio against their target allocation.

**Risks and Scenarios:**

The return of any invested amount is not guaranteed and past income is no guarantee of future income. The risk indicator has been calculated under the assumption of compliance with the holding period. Actual risks may significantly differ should the strategy be to sell before the end of the recommended holding period.

**Investment €10,000**

A favorable scenario - expected balance after costs	14 761,32 €
Income/loss:	+8,10% p.a.
Neutral scenario - expected balance after costs	12 134,44 €
Income/loss:	+3,95% p.a.
Unfavorable scenario - expected balance after costs	9 850,55 €
Income/loss:	-0,30% p.a.
Stress scenario - expected balance after costs	8 008,88 €
Income/loss:	-4,34% p.a.

The table shows an example of the expected return you may achieve during the recommended holding period if you invest €10,000. The actual return may be lower.

The above scenarios only estimate future returns based on previous 10-year returns on financial markets. Your investment may perform differently depending on how long you follow the strategy. The scenarios may not factor in all costs and total costs may also differ depending on the selected broker.

## THEMATIC ESG INVESTMENT STRATEGY

### Basic information:

Reference currency	EUR
Minimum one-time investment	€5,000
Recommended holding period	At least 15 years
Optimum portfolio structure	100% equity component

### Investment restrictions:

- Maximum share of equity component investments - 100%
- Maximum cash share - 10%
- The strategy includes reinvesting of returns
- The share of a single instrument in the portfolio must not exceed a weighting of 25%

### Risk indicator:

- Product classification: 5 (SRRI)

**The thematic ESG investment strategy** is intended for clients with a low risk aversion, whose holding period is at least 15 years. Investors seek high returns and are willing and able to bear an increased risk. They are aware that a change in the holding period may significantly contribute to increased likelihood of a negative investment result.

### Investment strategy objectives:

The Thematic Strategy is a dynamic portfolio with a 100% representation of sustainable equities through ETFs. The portfolio is made up of thematic investments that are alternatives to traditional investment strategies. The key drivers are a focus on the sources of future growth, global challenges, structural change and the megatrends of the coming decades. The 4 main megatrends that have been identified as the most important for the future of society are demographics, environment, digitalization and global change. Individual topics from these megatrends are selected for the portfolio based on long-term potential and current situation as well as adoption rates or other fundamentals.

### Risks and Scenarios:

The return of any invested amount is not guaranteed and past income is no guarantee of future income. The risk indicator has been calculated under the assumption of compliance with the holding period. Actual risks may significantly differ should the strategy be to sell before the end of the recommended holding period.

## DYNAMIC ESG INVESTMENT STRATEGY

### Basic information:

Reference currency	EUR
Minimum one-time investment	€5,000
Recommended holding period	At least 15 years
Optimum portfolio structure	100% equity component, 0% bond component

### Investment restrictions:

- Minimum share of equity component investments - 80 %
- Maximum cash share - 10 %
- Maximum share of bond component investments - 20%
- The strategy includes reinvesting of returns
- The share of a single instrument in the portfolio must not exceed a weighting of 25 %

### Risk indicator:

- Product classification: 5 (SRRI)

**The ESG investment strategy** is intended for Clients whose holding period is at least 15 years. Investors willing and able to bear increased risk in order to seek high returns. They are aware that a change in the holding period may significantly contribute to increased likelihood of a negative investment result. They want to reach their objective by investing in socially responsible companies that operate outside controversial sectors. The dynamic investment strategy is actively managed. The strategy's structure may change based on market conditions or upon switching between ETF alternatives while preserving the strategy, allocation and diversification of the defined portfolio. The distribution of the portfolio may differ from the optimal allocation and individual components may be overweighted or underweighted by 20%. The dynamic investment strategy aims to achieve a high yield potential at a high volatility level.

### Investment strategy objectives:

The conservative component includes bond ETFs that invest in bonds with shorter, intermediate and longer-term bonds. This component is diversified geographically, investing primarily in corporate bonds, and to a lesser extent in government bonds. It focuses on both investment-grade and non-investment-grade bonds. Investments in US or in emerging markets may not be hedged in euros, although the strategy internally hedged instruments are preferred in the selection process.

### **PARTNERS INVESTMENTS, o.c.p., a.s.,**

## INVESTMENT RISKS

A list of risks that may affect investment development.

### **Market risk**

Market risk relates to the global development on financial markets, immediately affecting values of individual asset types included in the portfolio. Depending on the nature of the market factor that can cause a change in the value of a given investment asset, market risk is mainly understood as interest rate, currency and equity risk. Other significant risks include liquidity, operational, legal, and political risks.

### **Currency risk**

Currency risk relates to changes in the value of an asset expressed in euro due to exchange rate changes between the euro and another currency in which this asset is denominated. The value of an asset denominated in a currency other than the euro and expressed in euro increases when the exchange rate of this currency strengthens against the euro. The value of an asset denominated in a currency other than the euro and expressed in euro decreases when the exchange rate of this currency weakens against the euro. The degree of currency risk depends primarily on the current percentage in the portfolio of the assets invested in a currency other than the euro. An investment strategy may invest in financial instruments denominated in currencies other than the euro.

### **Interest rate risk**

Interest rate risk is the risk of loss due to market interest rate fluctuations. They may affect primarily the bond components of portfolios. A rise in financial market interest rates decreases the value of financial debt instruments in the portfolio. On the other hand, a fall in financial market interest rates increases the value of financial debt instruments in the portfolio. In addition to interest rate risk, performance of a financial debt instrument is also affected by credit risk. It means the risk of loss due to a debtor's failure to meet their obligations under agreed terms and conditions. The degree of risk depends on the issuer's economic situation. The portfolio's interest rate and credit risks are managed by managing the portfolio duration, the portfolio's average maturity, and by investment limits restricting riskier asset types.

### **Equity risk**

Equity risk means the risk of an adverse change in the market prices of equity investment instruments and/or financial derivatives related to such instruments. The source of the risk is trading in equity instruments.

## **PARTNERS INVESTMENTS, o.c.p., a.s.,**

Einsteinova 24, 851 01 Bratislava, CRN: 52 413 179, TIN: 2121011475

The Company is incorporated in the Business Register of the Bratislava I District Court, Section Sa, File No 6941/B

Tel.: +421-2-32 002 732, e-mail: [info@partnersinvestments.sk](mailto:info@partnersinvestments.sk)

**Liquidity risk**

Liquidity risk is associated with the inability to convert a specific investment instrument to cash at the required price or to purchase or sell an investment instrument at the desired time or volume.

**Operational risk**

Operational risk closely relates to portfolio administration errors caused by a management company, depository, securities dealer or external business partners.

**Legal and Political Risks**

This primarily means the risk of change in the tax systems or legislation of countries where issuers of the financial instruments included in the portfolio operate.
